Position: Lead Backend Developer (Python, Golang)
Experience years: 11
English level: intermediate

- Implemented high-load backend for taxi drivers and clients 15k+ rps/60k+ connections(API and Microservices)
- Implemented CallCenter system based on Asterisk which processes 200+ calls at one moment.
- Implemented LocationBased Social Network architecture, API and microservices.
- Developing platform for manage social media reputation (working with instagram, Facebook and other social networks API).
- Implemented platform for children's smartwatches
- Implemented platform (API, billing, services) for Pre-order food and Food Delivery
- Implemented service for traffic monitoring and billing for ISP.
- Implemented service for motion detection for IoT and other IoT things.
- Implemented an advertising system
- Implemented payment gateway
- Implemented smart home software and hardware IoT things (LoRaWAN, ZigBee).
- Implemented highload datastore with lot of ETL pipelines
- Etc.

More than 12+ years of experience working in Backend development:
- Python (FastAPI, asyncio, Django/DRF, Flask, Celery, gevent)
- Golang (fiber, gin, beego, echo) - PostgreSQL, Redis, RabbitMQ, MongoDB, MySQL, ElasticSearch, Cassandra, Kafka, Tarantool
- Kubernetes, Docker, AWS, Azure
- Development of large, complex systems with highload
- Embedded software development (C, MicroPython)
- IoT development (LoRaWan, zwave, Raspberry Pi, Arduino, ESP32)
- Device drivers development for Linux
- Machine Learning (SparkNLP, StanfordNLP, TensorFlow, PyTorch, nltk etc)
- VOIP (asterisk, asterisk AGI scripts)
- Blockchain development (Basic Knowledges)
- Linux/MacOS Expert :)

prefer Highload or IoT projects
